

In-house versus Outsourced Application Development

In the IT industry, many organizations employ software development experts to develop applications. These applications may be used inhouse or provided to customers. Other organizations may outsource application development to one or more specialized external companies.

In this short paper, we examine the differences in productivity and delivery speed between in-house and outsourced application development.

NESMA news

On March 1st Harold van Heeringen gave a presentation on

Agile Team Performance Measurement

While traditional performance metrics often measure individual output or adherence to pre-defined plans, measuring performance in agile teams requires a different approach. Agile teams operate in iterative cycles, prioritizing adaptability and learning over rigid goals. So, why do organizations still measure their performance?
